The prior art made of record, in single or in combination, does not disclose explicitly the limitations of

"each cell including:

- I) a memory for receiving a data packet from another cell of said array;
- II) a control entity to control release of a data packet toward a selected destination cell from among the plurality of other cells of said array at least in part on a basis of a degree of occupancy of the memory in said destination;
- III) a transmitter in communication with said I/O interface and in direct communication with every cell from among the plurality of other cells of said array, said transmitter operative to process a data packet received from said I/O interface to determine a destination of the data packet and forward the data packet to at least one cell from among the plurality of other cells of said array selected on a basis of the determined

destination;

IV) a plurality of receivers associated with respective cells from said array, each receiver being in direct communication with a respective cell allowing the respective cell to forward data packets to the receiver; said receivers in communication with said I/O interface for releasing data packets to said I/O interface" as disclosed in claim 1.

3. Additionally, all of the further limitations in claims 3 – 44 are allowable since the claims are dependent upon the independent claims.
